Jbx Signature Overview

Click to jump to signature section

AV Detection:

Multi AV Scanner detection for submitted file

Multi AV Scanner detection for dropped file

System Summary:

PE file has a writeable .text section

Data Obfuscation:

.NET source code contains in memory code execution

Stealing of Sensitive Information:

Yara detected Vidar stealer

Found many strings related to Crypto-Wallets (likely being stolen)

Remote Access Functionality:

Yara detected Vidar stealer

Mitre Att&ck Matrix

Initial Access	Execution	Persistence	Privilege Escalation	Defense Evasion	Credential Access	Discovery	Lateral Movement	Collection	Exfiltration	Command and Control	Network Effects

Preview:	1 Notes on the Free Translation Project.**********..Free software is going international! The Free Translation Project is.a way to get maintainers of free software, translators, and users all.together, so that free software will gradually become able to speak many.languages. A few packages already provide translations for their.messages... If you found this `ABOUT-NLS' file inside a distribution, you may.assume that the distributed package does use GNU `gettext' internally,.itself a vailable at your nearest GNU archive site. But you do _not_.need to install GNU `gettext' prior to configuring, installing or using.this package with messages translated... Installers will find here some useful hints. These notes also.explain how users should proceed for getting the programs to use the.available translations. They tell how peo ple wanting to contribute and.work on translations can contact the appropriate team... When reporting bugs in the `intl/' direct

Preview:	Tux Typing 1.8.1.04 Apr 2010..NOTE - this document is reasonably correct but not completely current..It will updated as the maintainer's time allows. For GNU/Linux users, you.need the '*dev" files for the SDL libs listed below, and should have the.dev file for SDL_Pango if you want to display non-Western text. TuxType.will build successfully, but without SDL_Pango support, if this header/lib.is not found...Most GNU/Linux users can install Tux Typing with their distribution's .package manager (such as apt or yum). To build from source, you can grab.the tuxtype_w_fonts*tar.gz, untar it, and build with "./configure; make;.make install". You do not need Autotools unless you are building from.a Subversion repository checkout. MacOSX users and Windows users can.install with very user-friendly binary installer packages - DSB...The current web site is http://www.tux4kids.com..The developer mailing list is tux4kids-tuxtype-dev@lists.alioth.debian.org..Feel free to email with any feedback or

Preview:	1 Notes on the Free Translation Project.**********..Free software is going international! The Free Translation Project is.a way to get maintainers of free software, translators, and users all.together, so that free software will gradually become able to speak many.languages. A few packages already provide translations for their.messages... If you found this `ABOUT-NLS' file inside a distribution, you may.assume that the distributed package does use GNU `gettext' internally,.itself a vailable at your nearest GNU archive site. But you do _not_.need to install GNU `gettext' prior to configuring, installing or using.this package with messages translated... Installers will find here some useful hints. These notes also.explain how users should proceed for getting the programs to use the.available translations. They tell how people wanting to contribute and.work on translations can contact the appropriate team... When reporting bugs in the `intl/' direct

Preview:	How I Ported Tuxtype to Mac OS X:..**Note** I am writing this from memory. These steps should work, but if they do not, contact the tuxtype developer team and search google for answers. That is how I was able to port Tuxtype...**Note** My tuxtye.xcodeproj should exist in the Tuxtype SVN. Open that to see my settings for the p roject...Requirements: .1. Mac OS 10.4 or higher (10.3, SDL, and Quicktime causes an error, so use 10.4).2. Xcode 2.5 [a free download from Apple's website] (or Xcode 3 should work but has not been tested)...Steps to get Tuxtype working on a Mac:..1. Download the following source codes:. a. SDL (I used version 1.2.12) [http://w ww.libsdl.org/download-1.2.php]. b. SDL_image (I used version 1.2.6) [http://www.libsdl.org/projects/SDL_image/]. c. SDL_mixer (I used version 1.2.8) [http://ww w.libsdl.org/projects/SDL_mixer/]. d. SDL_ttf (I used version 2.0.9) [http://www.libsdl.org/projects/SDL_ttf/]..2. Once you have SDL, open the SDL direct

Preview:	Tux Typing 1.8.1.04 Apr 2010..NOTE - this document is reasonably correct but not completely current..It will updated as the maintainer's time allows. For GNU/Linux users, you.need the "*dev" files for the SDL libs listed below, and should have the.dev file for SDL_Pango if you want to display non-Western text. TuxType.will build successfully, but without SDL_Pango support, if this header/lib.is not found...Most GNU/Linux users can install Tux Typing with their distribution's .package manager (such as apt or yum). To build from source, you can grab.the tuxtype_w_fonts*tar.gz, untar it, and build with "./configure; make;.make install". You do not need Autotools unless you are building from.a Subversion repository checkout. MacOSX users and Windows users can.install with very user-friendly binary installer packages - DSB...The current web site is http://www.tux4kids.com..The developer mailing list is tux4kids-tuxtype-dev@lists.alioth.debian.org..Feel free to email with any feedback or
